

Drupal POS

An Open Source POS for OmniChannel Commerce

END-TO-END SOLUTION, COMPLETELY OPEN SOURCE

With the Drupal POS system your ecommerce business now has an end-to-end solution that is completely open source. Drupal offers true content management, a powerful commerce engine, and now a complete point of sale system that will seamlessly align your digital experience across all channels.

Rather than be handcuffed to restrictive proprietary or homebrewed platforms, you can utilize a true digital experience platform without sacrificing money, ownership, or flexibility. With Drupal and the Drupal POS you can build virtually any experience you can dream up for your customers, from smartphone, to desktop, to brick and mortar and back again.

BENEFITS

Accessibility

Connect to your business information from anywhere and from any device. Access reports, troubleshoot issues, and check on any location without needing to be in-store.

Real Time Data

Ability to access up to the minute sales & inventory data from any POS location without having to wait for the end of day consolidation.

Single Database

Store your inventory, content, product info, pricing, customer data, digital assets, and functionality in one system.

Open Source

Ability to access the code means it's available for complete transparency and customization, you can control virtually every aspect of it.

Free

No monthly fees, no paying per additional location, register, user or functionality.

WHAT IS THE BEST FEATURE OF THE DRUPAL POS?

There isn't one, yet. The Drupal POS is built upon the same open source technology and modular architecture as Drupal Commerce, so it's most impressive feature is its ability to adapt to your business needs. Whether you want to modify a current feature or have us create something unique to your business this is the freedom open source allows for.
